

COVID-19 deaths of Welsh Care Home Residents —UPDATE 28 July 2020

Since week 12, there have been 1372 excess deaths of adult care home residents in Wales compared to 2018/2019 average
Of these, 736 were attributed to Covid-19

Data source: Care Inspectorate Wales

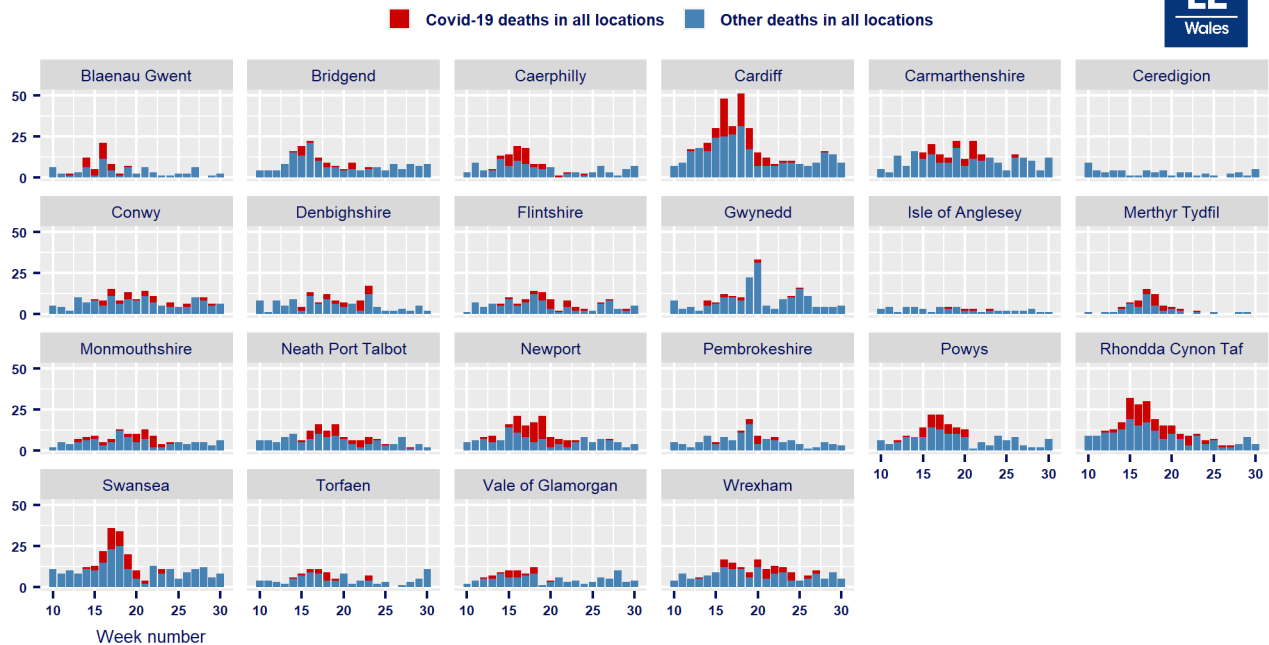

There have been 1,372 excess deaths of adult care home residents in Wales since week 12. Around three quarters of these deaths occurred in nursing homes. Of the total excess deaths, 736 (54%) were attributed to COVID-19.

In the week ending 24 July (week 30), the total number of excess deaths increased by 25 compared to the previous week and there were no new notifications of deaths attributed to COVID-19 for the first time since the first notification in week 12.

There have been no new notifications of COVID-19 deaths in the last four weeks in 15 of the 22 Welsh local authorities. On average across Wales just under 3 care home residents with COVID-19 have died per 100 care home beds.

The data presented here are based on notifications of deaths to Care Inspectorate Wales and include deaths of care home residents in all locations except where indicated. The data include deaths of people with suspected or confirmed COVID-19 and are based on the date of notification to CIW, rather than on the date of death. Data are provided up to the week ending 10 July (week 28). Data on bed numbers were provided by CIW in early June.

There were no notifications of care home resident deaths from COVID-19 in the four weeks to 24 July in 15 Welsh local authorities

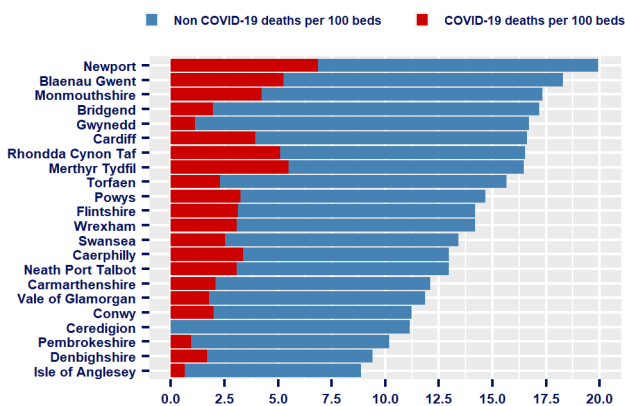

Data source: Care Inspectorate Wales

Across Wales 2.9 COVID-19 deaths of care home residents have been notified per 100 beds

For notifications between 1 March and 24 July 2020

Weekly all-cause deaths for residents of Welsh care homes.....

.....in 2020 are close to the range of previous years
